

Baby Pilot Plus

Summary:

“Babylotse Plus” is a follow-up project of “Babylotse” which was initiated in Hamburg in 2007. Babylotse Plus is conducted in the context of the „Bundesinitiative Netzwerke Frühe Hilfen und Familienhebammen“, by the National Center for Early Help (Zentrum für Frühe Hilfen) in the maternity hospital of the Charité Universitätsmedizin, Berlin. The objective is to promote competences of parents and to enhance child protection in Berlin. Midwives and “Babypilots” support parents in case of problems and, if needed, they also assist to contact adequate/further help. This all-round-help package is offered to all parents whose children are born in the Charité during the time of the project. The project will be evaluated to further improve the offer of help.

Principal investigator:

Klapp, MD, Dept. of Obstetrics
Henrich, MD, Dept. of Obstetrics
Keil, MD, MSc

Project coordinator:

Research associate:

Data management:

Stasun
