

## Study on the "Health Economic Monitoring of the Expansion of Occupational Health Management in the Division of the German Federal Ministry of Defense"

### Summary:

The aim of this study is to evaluate the health, economic and social benefits and costs of occupational health management (OHM) for employees and for the Bundeswehr as an employer. In the project, existing data from the trial phase on occupational health management measures will be evaluated on the one hand, and on the other hand, a new survey and evaluation of data and key figures will be carried out in different services. The aim is to comprehensively examine the achievement of the goals of the occupational health management measures for all employees in the military and civilian sectors and the resulting evaluation of efficiency. The research project also serves to identify potential obstacles and process-supporting measures that arise in connection with the implementation of OHM measures within or outside of duty hours.
